PROFESSIONAL DIPLOMA IN FAÇADE ENGINEERING

This Professional Diploma course is designed to provide education to the participants who come from a range of backgrounds, including technicians, designers, estimators, architects, consultants, engineers or managers, to educate them with thorough grounding in the theory and practice of façade engineering that are sufficient for them to successfully manage many roles that are associated in this sector of construction industry.

The course is developed and delivered by industry specialists and consists of rich contents which are much relevant to the emerging façade industry. It is delivered online via interactive webinars and workshops between 80 to 90 hours over 20 sessions over a period of 9 months. The course includes six core modules covering all the basics and some advanced contents in façade engineering. The students will be assessed by short exams and assignments.
